

Wellisair
Air disinfection performance

Wellisair is a patented air and surface disinfection unit destroying 99.9% of virus, bacteria, odours, mould and volatile organic compounds creating a safe environment. 24/7 continuous purification through Hydroxyl Radical technology.

KEY FEATURES

- No filters; replace a cartridge every 3 months
- Compact & Easy to install
- Low Noise - less than 2dB
- 60m² h area coverage

Hydroxyl Radical (OH) is the most important natural oxidant in the troposphere. It is vital in the removal of greenhouse gases such as carbon monoxide and methane. Wellisair uses innovative patented technology which constantly generates and expands hydroxyl radicals. No virus can live without Hydrogen. OH works through a process called respiratory explosion that steals the hydrogen atom from the virus compound causing them to breakdown.

AIR FILTRATION

Our range of plug and play air filtration units turn any indoor space into a virus free environment. Reduce the viral load of rooms with continuous high efficiency clean air circulation.

2 SIZES

300EC

45m² in area
300m³/h airflow

600EC

90m² in area
600m³/h airflow

REINTAIR AIR PURIFIER

The reintair pulls contaminated air through a dual filtration process - a set of highly efficient G4 and HEPA 14 air filters that trap harmful particles and recirculates the clean filtered air back into the room.

DUAL FILTRATION PROCESS

- G4 filter removes large particles
- HEPA 14 removes smaller particles

FEATURES & BENEFITS

- Soundproof aluminium profile
- Easy assembly & disassembly
- High efficiency backward curved impeller

K7 VENTILATION UNIT

The K7 is designed to fit into false ceilings or can be fixed with brackets to the ceiling. The K7 uses a double patented disinfection and purification technology through the generation of hydroxyl radicals and the effect of photosynthesis.

KLEENFAN TECHNOLOGY

- Photocatalytic disinfectant & UVA rays
- Reactive Oxygen Species deactivate pathogens
- Mineralises pollutants in urban areas
- Covers a 300² area
