

Environmental Statement

Axair Group

Axair recognises its role in working towards a more environmentally friendly future as part of a vital global strategy. This policy seeks to embed our commitment towards environmental impact and sustainability across every function including sourcing and procurement.

Axair will strive to:

- encourage the use of low energy, high efficiency motors for all new projects. Due to mechanical constraints these may not be a practical alternative in certain products and we continue to make available the most efficient motors that can fit into customers existing products.
- training our employees in the importance of good design we can encourage our customers to implement design changes that optimise the performance of their systems.
- explain to our customers the environmental impact of having multiple deliveries and encourage them to accept monthly not weekly despatches.
- reduce waste and consumption of resources, this includes but is not limited to the selection of mode of transport when visiting suppliers or customers.
- in discussions with our suppliers we will reduce all unnecessary packaging and all our waste paper and cardboard is shredded and used as low impact packaging to protect our products in transit.
- by maintaining neat and tidy premises and the regular collection of rubbish from the grounds we can minimise the adverse effect we, as business, might have on our local ecosystems.

Axair Fans will develop, document, communicate and undertake annual reviews to ensure that our policies always meet our legal obligations and endeavour to encompass best practice. This policy shall be communicated to all our employees and be available for public scrutiny via our website.

Grant Edwards
